Associate - Public Health Degree - General Interest Application

[Apply Now](#)

Company: Clinton Health Access Initiative, Inc

Location: Senegal

Category: other-general

Overview

CHAI uses operations research, mathematical modeling, impact evaluations, and other analytical tools to provide the evidence needed to dramatically increase the efficiency and impact of global health interventions. Working closely with CHAI's country teams and partner governments, we address challenges faced in many resource-limited settings such as the scarcity of human resources, and the availability and distribution of drugs and commodities. The Associate will work closely with CHAI Teams to support a variety of projects, including, but not limited to, conducting literature reviews, checking data and assisting with preliminary analysis, preparing presentations to share research results, writing project reports, and supporting other requests as needed. This Associate role requires strong analytical skills, and would be best suited for individuals with a public health background, who are interested in applying their quantitative/qualitative training in biostatistics, epidemiology, economics, or a related degree.

The Associate must be able to function independently, be flexible, and have a strong commitment to excellence. CHAI places great value on relevant personal qualities: resourcefulness, responsibility, tenacity, independence, energy, and work ethic.

Responsibilities

Contribute to the planning and execution of high-impact projects

Assist in updating M&E framework

Ensure alignment of program M&E framework with existing data systems and results frameworks

Provide research and analytical support

Develop tools such as survey instruments, protocols, and databases for program monitoring and evaluation purposes

Support evaluation and documentation of results and impact from CHAI's work

Develop tools for the presentation and dissemination of information to inform program design and modifications by decision-makers and for optimization of program strategies

Build and manage relationships with key individuals in the Ministry of Health, in CHAI and relevant partner organizations

Represent CHAI at relevant technical working groups and meetings

Establish baseline and end line measures across target counties and at the national level

Evaluate current use of data systems at the facility, county, and central level and provide recommendations for integration of program M&E with existing systems and using existing population-based surveys and assessments

Identify potential areas of additional support in existing and new focal countries

Build capacity of county and health facility staff in timely and accurate health data collection, management and dissemination

Contribute to donor reports

Conduct other formative and operational research as necessary

Perform other tasks as necessary

Qualifications

Master's degree in epidemiology, biostatistics, public health, information management, economics or relevant subject matter strongly preferred with a minimum of 3 years work experience

Excellent problem solving, analytical and quantitative skills

Have good understanding of M&E challenges and limitations in post-conflict and low-resource settings, particularly for hard-to-measure and sensitively public health issues

Demonstrated experience in developing and implementing M&E systems for health programs from end to end (frameworks, information systems, data collection tools, data collection and analysis, reporting, etc.

Experience with public health research, implementation science, and the relevant evaluation models and methods, particularly in establishing baseline figures and assessing post-intervention changes and targets

Experience with health information management systems and relevant platforms

Exceptional attention to detail, with strong organizational and problem solving skills

Ability to work under pressure in a fast-paced environment, and collaborate effectively with a multidisciplinary and multicultural team of colleagues and stakeholders

Excellent verbal and written communication skills in English, including the ability to effectively synthesize large amounts of information and potentially complex analyses for consumption by a wide audience

Ability to learn on the job quickly and absorb/synthesize a broad range of information

Ability to react quickly to ad-hoc requests while managing an existing workload

Excellent analytical skills, qualitatively and quantitatively; high proficiency in MS Office Suite, including Excel, PowerPoint, Word, Access, and other relevant software packages

Prior experience in Africa, strongly preferred

*** Strong professional fluency in English and French will be required for opportunities based in West and Central Africa**
